

Check valves type RK/RB, RC, RE, and ER

The check valves type RK/RB, RC, RE, and ER are used to block the flow in one direction and enable free flow in the opposite direction.

The check valves type RK/RB are ball seated valves, where the valve element is spring loaded. They are sturdy and contamination tolerant due to their design.

The screw-in check valves type RC may be installed in both directions with the spring loaded valve shim enabling rapid switching sequences.

There are also versions available featuring metric thread or a housing.

The screw-in check valves type RE is a shim type check valve also but without spring pre-load. This enables a very compact and simple method

of blocking the oil flow in one direction.

This valve can be used as a “foot valve” in the suction pipe of pumps.

The mounting hole for all screw-in check valves can be easily machined with a standard drill (point angle 118°).

The check valve inserts type ER feature a ball seated design and are commonly installed in the ports of ball seated directional valves or other manifold mounted valves.

Nomenclature:	Check valve
Design:	Screw-in valve Valve insert with housing for in-line installation
p_{max}:	400...700 bar
Q_{max}:	6...120 lpm

Basic types and general parameters

Size	Ball seated valves		Shim type valves		Ball seated valves	Connection thread (BSPP) ¹⁾	
Symbol							
Basic type	RK	RB	RC	RE	ER ¹⁾		
0	Q _{max} (lpm)	10	10	---	12	6	G 1/8 A
	p _{max} (bar)	700	700	---	500	500	
1	Q _{max} (lpm)	20	20	20	25	12	G 1/4 A

3	Q _{max} (lpm)	80	80	60	70	65	G 1/2 A
	p _{max} (bar)	500	500	500	450	500	
4	Q _{max} (lpm)	120	120	---	120	120	G 3/4 A
	p _{max} (bar)	500	500	---	400	400	

Additional versions

- Type RK/RB and RC with housing for in-line installation
- Type RK/RB, RC, and RE also available with metric thread
- Type ER also available in stainless (size 01...31)

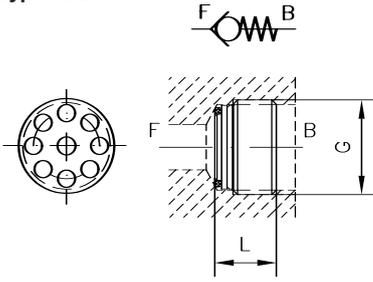

¹⁾ Type ER is a valve insert
